Rene Francisco

Toronto, ON, Canada • 647-774-2198 • renecofrancisco@gmail.com • LinkedIn • GitHub

PROFESSIONAL SUMMARY

Full-stack software engineer with 10+ years delivering production systems across e-commerce, enterprise SaaS, and telecom. Specializes in .NET/C#, React/TypeScript, and Azure, with a track record of owning complex features end-to-end, from payment integrations and microservices on Kubernetes to serverless processing and API design. Currently building Azure AI expertise (AI-102 in progress) to integrate LLM-based solutions into backend systems. Seeking senior engineering roles where technical depth and end-to-end ownership matter.

CORE COMPETENCIES

Languages & Frameworks: C#, ASP.NET Core/MVC, React (Hooks), TypeScript, JavaScript, Python

Databases & Caching: MS SQL Server, PostgreSQL, Redis, ElasticSearch, Entity Framework Core

Cloud & Infrastructure: Azure, Azure Functions, Azure Service Bus, Azure Blob Storage, Azure Key Vault, Application Insights, AWS (EKS, CloudFormation), Docker, Kubernetes, CI/CD, Azure DevOps

Architecture & Practices: Microservices, REST APIs, xUnit, Jest, OWASP Security, Code Reviews, Agile Scrum, Performance Optimization, Technical Mentorship

PROFESSIONAL EXPERIENCE

Intermediate Software Developer | StickerYou — *Jan 2022 – Sep 2025*

Toronto, ON, Canada | E-commerce platform for custom stickers, labels, and decals

- Designed and implemented a serverless AI-powered processing service using Python and Azure Functions, integrating asynchronous pipelines with strict reliability and uptime requirements.
- Led end-to-end Stripe and Afterpay payment integration, increasing conversion rates by 25% and expanding payment flexibility. Changes spanned the full stack from React/TypeScript UI through ASP.NET Core services to MS SQL Server.
- Architected and deployed an internal order management system replacing manual workflows, reducing order turnaround time by 60% through reliable backend automation and stakeholder-aligned delivery.
- Expanded the product platform by onboarding 10+ new SKUs, designing backend data models, pricing logic, and production workflows to support scalable feature rollout.
- Wrote unit and integration tests using xUnit and Jest, enforcing coding standards and maintaining high code quality across the full stack.
- Participated in the full software development lifecycle, from gathering and analyzing business requirements and collaborating with stakeholders, through to system design, implementation, testing, and production deployment.
- Contributed to system design discussions, defining API contracts, data models, and deployment strategies, communicating effectively with both technical and non-technical stakeholders.
- Mentored junior engineers and conducted rigorous code reviews, reinforcing clean architecture, engineering standards, and team knowledge-sharing.
- Leveraged GitHub Copilot/Claude Code across the team's development workflow, accelerating delivery and reducing boilerplate overhead in day-to-day feature work.

Tech Stack: C#, ASP.NET Core, EF Core, MS SQL Server, React, TypeScript, Azure, Azure Functions, Python, REST APIs, xUnit, Jest, Application Insights (observability)

Software Engineer | Infor PSSC Inc. — *Jan 2018 – Nov 2021*

Philippines | Multi-tenant Enterprise B2B SaaS

- Developed and maintained individual services within a microservices architecture deployed on EKS, including the Configurator, Change Control, Enterprise Quoting, and ElasticSearch services, each owning a distinct business domain and communicating via REST APIs with token-based authentication enforced at the service level.
- Led a zero-downtime ElasticSearch upgrade across a multi-tenant SaaS platform by introducing abstraction layers and tenant-level versioning to enable phased migration without service disruption, directly supporting SLA targets and operational continuity.
- Identified and remediated OWASP security vulnerabilities across the platform, strengthening security posture and reducing production risk in a high-compliance enterprise environment.
- Designed and implemented a tenant-aware database clone and refresh framework to support QA regression testing with strict data isolation guarantees.
- Wrote unit and integration tests across service boundaries to validate behaviour in a distributed system, and conducted peer code reviews to reinforce engineering standards.
- Investigated and resolved infrastructure issues by analyzing AWS CloudFormation (IaC) templates and EKS (Kubernetes) deployment configurations, monitoring pods and logs across services to support system health and incident resolution.

- Recognized as “Top 1 Bug Fixer” of the team multiple times, demonstrating strong ownership, defect-free programming discipline, and commitment to delivery quality.
- Mentored junior engineers through regular code reviews and pair debugging sessions, helping them build confidence and grow into more independent contributors.

Tech Stack: C#, ASP.NET Core, React, TypeScript, MS SQL Server, ElasticSearch, REST APIs, Azure DevOps, AWS, CloudFormation, EKS (Kubernetes)

.NET Web Developer | PLDT *Mar 2016 – Nov 2017*

Philippines | Philippines' largest telecommunications company

- Architected and delivered a bank remittance and reconciliation application handling financial transaction accuracy, reducing manual errors and improving auditability across high-volume processing workflows.
- Independently designed and implemented a rate-plan creation and approval system, reducing processing time from 2 weeks to 2 days through structured workflow automation and stakeholder alignment.
- Gathered requirements through stakeholder interviews and documentation review, conducted workflow analysis, and delivered web applications tailored to each business unit's operational needs.

Tech Stack: C#, ASP.NET MVC, MS SQL Server, JavaScript, REST APIs, AJAX

Solutions Developer | De La Salle University *Jun 2012 – Oct 2015*

Philippines

- Contributed to design and delivery of enterprise web systems including a performance evaluation platform, online grade submission portal, and research tracking system, digitizing paper-based institutional processes.
- Optimized a high-latency stored procedure during peak enrollment, restoring production stability under time-critical conditions.

Tech Stack: C#, ASP.NET MVC, MS SQL Server, JavaScript, SOAP, WPF, VB.NET

CAREER BREAK

Intentional Career Break *Sep 2025 – Present*

Earned Microsoft Certified: Azure Fundamentals (AZ-900) and Azure AI Fundamentals (AI-900); currently pursuing Azure AI Engineer Associate (AI-102). Also built an AI-powered RAG interview assistant (Next.js, OpenAI, Supabase pgvector) and serving as volunteer Technical Lead for a Canadian registered charity, providing architectural direction to a team of 4 developers.

PROJECTS

Rene-AI | Next.js, TypeScript, OpenAI API, Supabase pgvector, Vercel

- Built a personal AI interview assistant using a RAG pipeline, implementing conversational memory ingestion, vector similarity search, and a dual-interface architecture (public interview chat and password-protected admin chat).
- Live demo: https://rene-ai-orcin.vercel.app | GitHub: github.com/renecofrancisco/rene-ai

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900), Oct 2025
- Microsoft Certified: Azure AI Fundamentals (AI-900), Oct 2025
- Microsoft Certified: Azure AI Engineer Associate (AI-102), In Progress

EDUCATION

Bachelor of Science in Computer Science *Jun 2005 – Mar 2009*

De La Salle University – Dasmariñas, Philippines
